# StepGuardian™

**AUTOMATIC HOOFBATH**

**FOR EXCELLENT HOOF HEALTH**

# STEPGUARDIAN™

HOOF CARE

MANAGEMENT

*StepGuardian is a fully automatic, computer-controlled system that eliminates time spent cleaning, filling, refilling and emptying the hoofbath. It reduces chemical waste by having a precise metering system to dispense the chemicals into the mixing chamber and it can be controlled at the station or remotely from your office using the included PC software.*

Your dealer:

## Save time, reduce chemical waste & attain excellent hoof health

- **Maintain hoofbath efficiency** - Automated timely cycling of fresh solutions improves treatment effectiveness. Together with precision metered dosing, it helps reduce chemical waste.
- **Pre-bath and hoofbath for perfect hoof health** - The pre-bath cleans hooves to make the hoofbath more effective. The hoofbath treats the hooves. Both are automatically cleaned and filled. One controller can handle up to 4 hoofbaths.
- **A safer working place** - Workers handle chemicals far less than with manual systems. The location of the mixing chamber in the utility room allows for better mixing of the chemicals.
- **Tough and durable** - This is a tough, stainless steel hoofbath that will not crack in severe cold temperatures. It is immune to chemical corrosion.
- **Part of a complete hoof care program** - Use with BouMatic's hoofbath solutions, StepSept PB50 & StepSept Power and attain unsurpassed hoof health, and increased milk production. That translates to a stronger bottom line for your dairy operation.
