BlueMAX

PERFECT TEAT HYGIENE

Discover the BlueMAX Family Range

Taking good care of teats means taking good care of your cows and, in turn, improving their performance. You will find the right solution for your needs in our BlueMax range.

Get your teat preparation right

Teat cleaning and preparation are essential steps. They call for a great deal of care and attention.

The BlueMax Family range offers the ideal solution for excellent cleaning but also optimum teat conditioning.

Protect the teats after milking

Protecting the teats after milking is important for udder health. BouMatic has developed a specific range of products to combine "Teat protection" and "Skin conditioning". Healthy skin is the first line of defence for teats. That is why BouMatic has opted for high quality emollients in its range of BlueMax post-milking disinfecting or cosmetic products to keep teats supple and soft milking after milking.

The BlueMAX products combine 3 types of emollients:

- Humectants absorb moisture from the air.
- Occlusive agents prevent water from evaporating from the teat.
- Moisturisers release water directly from the emollient to the skin.

You use teat wipes? BouMatic has the solution!

Nearly 30% of farmers use wipes for their teat preparation. That is why BouMatic has developed a new prolonged action disinfectant with active oxygen. This allows you to start your next milking shift effortlessly with clean and sanitised wipes.

BlueMax Family: A solution for every situation!

Premium

An exclusive product!

BlueMAX Premium from BouMatic is the only pre and post-milking READY TO USE chlorine dioxide product!

Highly innovative **BlueMAX Premium** is an unparalleled solution to date, thanks to its patented "ebond" technology which gives it stability and performance.

BlueMAX Premium offers real ease of use and avoids product wastages compared with all the other teat dips based on chlorine dioxide.

- Pre or post-milking teat disinfection
- Can be used as foam, spray or dip
- Reduced consumption for better cost control
- Contains more than 15% of emollients to keep teat skin soft and moisturised

BlueMAX Premium contains the ideal level of lactic acid to prevent hyperkeratosis.

Xtrem

Cosmetic product containing chlorine dioxide

BlueMAX Xtrem contains 15% of emollients for optimal skin conditioning. Perfectly healthy teats help fight against mastitis. When the teat skin is soft and supple, cleaning teats before milking is extremely easy..

BlueMAX Xtrem also contains lactic acid, which ensures optimum skin exfoliation so as to prevent hyperkeratosis and sanitize the teat skin.

- High visibility
- With READY TO USE chlorine dioxide

B Clean™

Pre-milking product for excellent cleaning and preparation of the teats

High foaming

BlueMAX B Clean is the best pre-milking foam dip on the market for dairy farmers. The pre-milking foam application speeds up the teat preparation process and acts faster and more effectively to remove dirt.

Maximum versatility

BlueMAX B Clean is composed of high levels of surfactants in order to better penetrate embedded dirt during application, whether in foam, spray or dip form.

- Leaves no residue
- Excellent teat skin conditioning
- Increased stability over time

Reduction of teat conditioning time

- The exclusive **BlueMAX B Clean** formula quickly removes dirt and facilitates the preparation of the teats. It saves time when cleaning soiled teats.

Barrier

A rapid natural disinfection and a physical barrier between milkings

The new generation product **BlueMAX Barrier** preserves the natural balance of skin hydration by creating a barrier permeable to air on each teat. This barrier helps prevent bacteria from reaching the open teat canal.

BlueMAX Barrier also maintains emollients in place so as to extend the skin conditioning of the teats longer than barrier-free dip products.

- Mint scent (tonic and astringent effect)
- Low consumption per application
- High visibility
- Quickly eliminated before the next milking
- Insect repellent

Powerful germicide

Based on biphenyl-2-ol, **BlueMAX Barrier** quickly eliminates bacteria and protects the teats between milkings.

PRE-MILKING

POST-MILKING

Spray

The 1st ready to use chlorine dioxide specially designed for robots

Drawing on the BlueMax Premium experience, **BlueMax Spray** has been developed specifically for application in robotic milking systems and helps collect high quality milk.

- 0.9% ready to use chlorine dioxide (disinfection and recognised effectiveness)
- Specially designed for teat spraying
- Optimum teat coverage
- Exclusive BouMatic E-bond technology
- Ease of use for robotic systems

BlueMax Spray can also be used for manual spraying in the milking parlour.

Active

BlueMax Active is a disinfectant powder specially designed for the disinfection and cleaning of wipes between milkings

Based on the principle of oxidation, disinfection starts at first contact with an organic material.

- Long-lasting active powder for disinfection of wipes between milkings
- Generated in situ, disinfectant by oxidation, peracetic acid
- Gradual release of the active ingredient
- Powder composed of blue particles: strengthens washing and bleaching
- Refreshing floral fragrance for a pleasant user experience.
- Suitable for all types of textiles.
- For bucket or machine use.
-

D Control™

The cosmetic product of choice

High quality teat conditioning

- Healthy teat skin is the best way of protecting cows against mastitis. **BlueMAX D Control** contains 17% of emollients to ensure superior-quality skin conditioning.
- **BlueMAX D Control** contains 3 different emollients - the ideal combination for optimal conditioning of the teat skin.
- The thick formula of this post-dip saves you money by ensuring the product remains on the teats.
- High visibility, even application.
- Easily removed with a traditional preparation for teats before the next milking.
- Very good adhesion on the teat

BETWEEN MILKINGS
